

## Rural Research Brief

## Rurality in the United States

For most of the nation's history, the United States has been a predominately rural place. In 1790 the first U.S. census revealed that 95 percent of the population resided in rural areas. The populace remained largely rural throughout much of the 19th century, but settlement patterns started to shift rapidly in the early $20^{\text {th }}$ century in response to an increasingly urban-oriented economy. In 1920, the census reported, for the first time, that more than half of the U.S. population lived in urban areas. From this point until today, the trend towards urbanization in this nation has been unabated.

The 2010 Census revealed a population of approximately 308 million people in the United States. Of those, roughly 65 million or 21 percent reside in rural or small town America. Almost half (49.1
percent) live in suburban or exurban communities, while 92 million residents, comprising 30 percent of the population, live in the urban core of our nation's large cities.

Urban America now dominates much of our industry, commerce, and media culture. But rural areas cannot be dismissed as a residual, or someplace other than urban. Rural America and its people are integral to the national society, economy, identity, and well-being. Rural America covers more than 90 percent of our nation's land mass, comprises one-fifth of the population, and supplies our nation with food, fiber, and fuel.

## ABOUT THIS SERIES

Rurality in the United States is the first in a series of Rural Research Briefs presenting data and findings from the recently released 2010 Census and American Community Survey (ACS).

The Housing Assistance Council (HAC) presents Rural Research Briefs to highlight selected social, economic, and housing characteristics of rural Americans.

The Rural Research Briefs series previews HAC's decennial Taking Stock report - a comprehensive assessment of rural America and its housing. Since the 1980s, HAC has presented Taking Stock every ten years following the release of Census data.

Population by Rural, Urban, and Suburban Residence, 2010

## DIFFERING MEASURES OF RURAL

OMB Outside Metropolitan Areas

There are many definitions and designations of "rural." No definition of rural is perfect, and each measure has strengths and weaknesses.

OMB Outside Metropolitan Areas
Among the more widely used definitions to delineate rural areas, The Office of Management \& Budget's (OMB's) Metropolitan Areas designation is based on county level geography and is predominately a measure of population density and community. Approximately 17 percent of the U.S. population and 75 percent of the nation's land mass are located outside of OMB designated Metropolitan Areas.

Census Defined Rural Areas
A measure based largely on population density, the U.S. Census Bureau classifies all population and housing units outside of "Urbanized Areas" and "Urban Clusters" as rural territory. Under the Census Bureau designation roughly 23 percent of the population and 97 percent of the nation's landmass are considered rural.

## USDA-RD Eligible Areas

The United States Department of Agriculture (USDA) utilizes a specific definition to establish "Eligible Areas" for rural housing programs administered by its Rural Development (RD) agency. USDA's Eligible Areas designation is one of the most expansive classifications of rural territory, encompassing approximately 34 percent of the nation's population.

## What is "Rural?"

The question of "what is rural?" confuses, perplexes, and confounds nearly everyone who works in rural areas or with rural populations of the United States. Establishing a universal definition of rural poses many challenges. In general, rural areas share the common characteristics of comparatively few people living in an area, limited access to large cities (and sometimes even to smaller towns), and considerable traveling distances to "market areas" for work and everydayliving activities. But rurality, like most other things in society, exists along a continuum and varies extensively based on proximity to a central place, community size, population density, total population, and various social and economic factors.

A number of government agencies and private sector organizations, including the Housing Assistance Council (HAC), define rural using differing measures. Policy makers often view the concept of rural through an urban-centric perspective. Many definitions contextualize rural within the framework of omission, in which urban and metropolitan areas are the focal point and all other territory is classified as rural by default. This type of analysis relegates rural areas and population to the background and treats them as secondary.

Some of the more commonly used definitions to designate rural areas are promulgated by agencies and organizations such as the Office of Management and Budget (OMB) and the Census Bureau and USDA Rural Development. However, these classifications are far from synonymous or mutually exclusive concepts. For example, after the 2003 OMB Metropolitan Areas reclassification, a majority of Census defined rural population now live in Metropolitan areas. Such incongruities illustrate the complexity of developing a rural definition for research and programmatic purposes.

Political and economic geography is another important consideration when determining the rural composition of an area. The county is commonly used as a unit of geography from which to classify rural or nonmetropolitan areas. In many rural areas, the county is often mostidentified with in terms of political, social, and economic contexts. However, county-based designations are a less than optimum criteria on which to base a rural definition. Large counties, particularly in the Western United States, may dilute or mask rural population given their geographic size and influence.

## A NEW WAY TO DEFINE RURAL: HAC'S SMALL TOWN AND RURAL DESIGNATION

Given recent changes and noted shortcomings to more commonly used definitions used to identify rural areas (e.g., OMB Metropolitan Areas, Census Defined Urban and Rural Areas), the Housing Assistance Council (HAC) developed a sub-county designation of rural and small town areas which incorporates measures of housing density and commuting at the Census tract level.

This new definition includes three general classifications of,

1) rural and small town tracts;
2) suburban and exurban tracts, and;
3) urban tracts.

While there is no perfect definition of "rural" HAC believes this housing density measure is a more precise indicator of rural character.

This definition classifies areas at a subcounty census tract level, and identifies important development patterns of suburban and exurban communities, which most major rural/urban definitions omit.

For programmatic purposes, HAC also recognizes and supports USDA's eligible areas definition.

For more information about defining rural areas contact HAC at

## How Rural is Your Community?

10 Most Rural States - Rural and
Small Town Population as a
Percent of Total State Population
. Wyoming -74.0\%

- Montana-72.2\%
. Vermont-70.6\%
. South Dakota—62.2\%
. Mississippi—61.7\%
- North Dakota—57.7\%
- Maine -51.9\%
. West Virginia—51.9\%
. Iowa-51.6\%
Alaska-50.6\%

## 10 States with the Largest Rural and Small Town Population

- Texas -4,377,018

California-3,015,350
North Carolina-2,944,145
Ohio- 2,626,905
Georgia-2,405,547
Pennsylvania-2,396,337

- Kentucky-2,171,340

New York-2,060,418
Missouri-2,028,202

## STATE OF RURAL

While rural areas encompass roughly onefifth of the nation's population, they still comprise half or more of the population in 11 states. The proportion of the population in these states is predominately rural, but they only make up about 14 percent of small town and rural population nationwide. In contrast, states with the 10 largest rural populations by number such as Texas, California, North Carolina, Ohio, Georgia etc. make up more than 40 percent of nation's rural population.

## ABOUT THE DATA

Unless otherwise noted, all data presented in this Research Brief are based on HAC tabulations of the 2010 Census, Summary File -1.
